

# Expanding EHS Excellence **Across Asia**

---

Global Standards · Korean Drive · Asian Reach

# The landscape: why EHS in Asia matters now

**Asia is the world's manufacturing floor — and the opportunity to connect global and local EHS is growing**

## **Global and local EHS standards must work together**

Every country in Southeast Asia has its own established EHS regulations and proven practices. At the same time, multinational operations must also satisfy global standards like ISO 45001 and internal corporate EHS requirements. The challenge is aligning both — not replacing one with the other.

## **Korean companies are deeply invested in Asia**

Korean conglomerates and mid-sized manufacturers already operate extensive facilities across Southeast Asia. As these operations mature and expand, the demand for EHS management that meets both Korean corporate standards and local regulations continues to grow.

## **The gap: global standards, local execution**

The challenge is not a lack of talent or systems in Asia. Each country — Indonesia, Malaysia, Thailand, Vietnam, the Philippines — has qualified HSE professionals who are already delivering effective safety management under their own national frameworks. What is needed is a bridge — a partner who can identify the differences between global and local standards, align them constructively, and help both sides work together. That is exactly what OH&S Bridge was built to do.

***The same work we do in Korea — connecting global requirements with local strengths — is needed across all of Asia.***

# Our Asia strategy: three pillars

01

## Global EHS applied locally

Our core competency — extended to Asia

We help organizations operating in Southeast Asia align global EHS standards — ISO 45001/14001, international audit requirements, and multinational compliance frameworks — with the effective local regulations and practices already in place.

This is the same bridging work we do in Korea, now applied across the region.

02

## Korean EHS expertise for Korean operations in Asia

Serving Korean companies where they operate

Korean conglomerates and their supply chain partners bring Korean-level operational discipline to their Asian facilities. They need EHS partners who understand both Korean corporate standards and local regulatory environments.

OH&S Bridge provides that bilingual, bicultural EHS capability.

03

## Asia HSE professional network

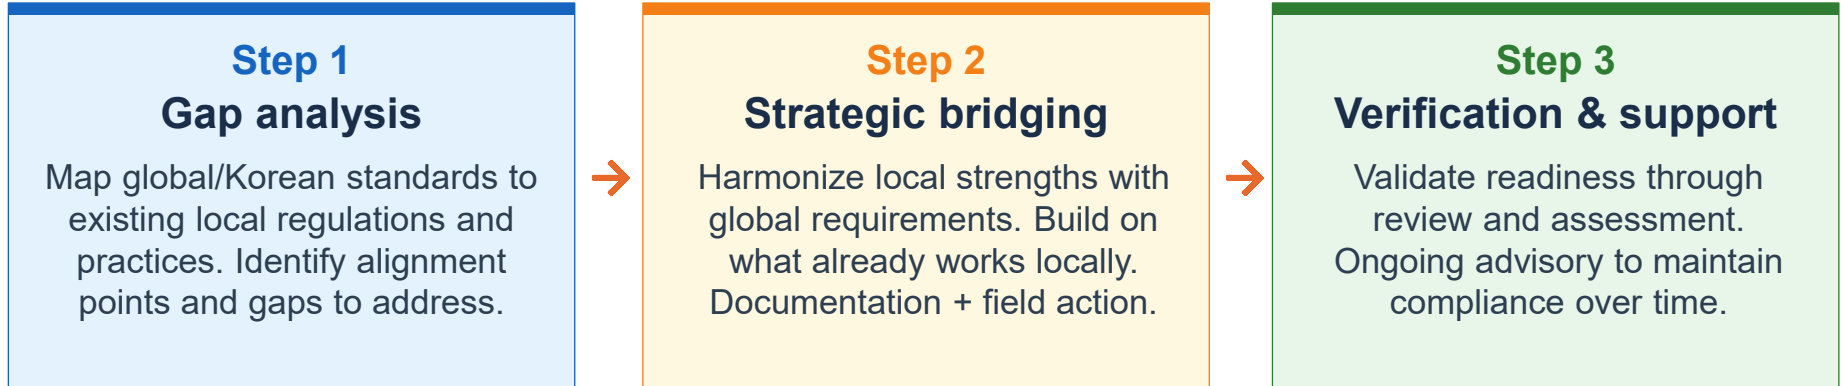

Building a collaborative ecosystem for mutual growth

We are building a collaborative network with experienced HSE professionals across Southeast Asia — professionals who already excel in their local markets. By connecting their expertise with Korean and global project opportunities, we create an ecosystem where knowledge flows both ways and everyone grows together.

Pillar 1 is our primary focus. Pillars 2 and 3 grow naturally from the relationships and expertise Pillar 1 creates.

# How we work: the Bridge approach in Asia

The same methodology. A wider reach.

## What makes this work across borders

- ✔ **20+ years global EHS experience** across 5 industries and 6 multinational companies
- ✔ **ISO 45001/14001 registered auditor** understanding what auditors actually look for
- ✔ **Bilingual capability (EN/KR)** bridging Korean HQ requirements with local teams
- ✔ **Local partner network** qualified HSE professionals embedded in each market

## Southeast Asia: where global standards meet local excellence

**ID** Indonesia

Active

Major manufacturing hub with well-established national safety regulations (SMK3). Strong pool of experienced HSE professionals. Growing demand for alignment between local frameworks and international audit standards.

**MY** Malaysia

Active

Advanced regulatory framework under DOSH with mature compliance culture. Highly qualified HSE professionals with strong English proficiency. Natural bridge market between global standards and ASEAN practices.

**TH** Thailand

Emerging

Key base for automotive and appliance manufacturing with robust national safety legislation. Active HSE professional community. Increasing demand for harmonizing local and international compliance standards.

**VN** Vietnam  
**PH** Philippines

Planned

Fast-growing manufacturing destinations with strong Korean corporate presence. Both countries have active national EHS frameworks and a growing pool of qualified professionals ready for international collaboration.

*We enter each market with respect for local expertise and systems. Expansion is driven by confirmed partnerships and mutual value — not assumptions.*

# Let's build the bridge together.

Whether you are a multinational seeking EHS compliance support in Asia,  
a Korean company managing safety across your regional operations,  
or an HSE professional looking to grow through international collaboration —  
we would like to hear from you.

## For organizations

EHS compliance, audit  
readiness, system design  
for your Asian operations

## For Korean companies

Korean-standard EHS  
management for your  
SE Asian facilities

## For HSE professionals

Partner with us.  
Grow through international  
projects and collaboration
